G.S ROSA MYSTICA DURING POST COVID PERIOD, January 2021

THE SCHOOL SITUATION FROM NOVEMBER 2020 UP TO JANUARY 2021

As it is known the entire world is suffering by covid 19 and its consequences! Our school also has also the same difficulties to coordinate all school activities during this period with covid 19.

Even if it was not easy to be ready to restart the school after lock down, we did our best in order to reopen as others in our country, some activities were done:

1. Publication posters against covid19

It was recommended to sensitize the school members about covid 19, how to protect ourselves and the wider community against covid 19.

We tried to avail to posters within the school that helps every person who enter in the school to have sensitivity about covid 19.

2. Put in place task force in charge of fighting covid 19

As it was recommended to have taskforce for supporting school initiatives against covid 19, there is the committee on school level.

Task force is involved in all activities such as testing temperature every day, assist students to wash their hands, to continue to control students for respecting social distance.

3. To avail the masks which are related to the school uniform.

By innovation, the school in collaboration with the teacher, the school got the masks for every student with the determined marks such as:

- Number
- Class
- Blue color for afternoon
- Beige color for morning.

Every student may have at least two masks, one for morning until lunch and other afternoon, they cage immediately after lunch.

4. To build hand washing stations

For sustainable use, it was recommended to build hand washing stations within the school in order to facilitate the sanitations activities.

This hand station helps students in the morning before entering in the classrooms, before lunch, after lunch and at every moment when it is necessary to wash hands.

5. To prepare the school to respect social distance in the classroom

In the collaboration with the Government, MINEDUC is offering 9 new classrooms and 8 toilets which are under building activities. Four rooms for primary and 5 rooms for secondary. It supposed that the ECD program may have to add rooms for trying to respect social distance with little children in Nursery.

As ECD program is not supported by the Government, building the new rooms for Nursery is the task for the school owner and parents! As it was a must to increase number of rooms for nursery, the parents negotiated with the engineer who accepted to build and wait the progressive payment since when the Nursery will be reopened.

In nowadays, the reopening date is communicated by MINEDUC, it is time to prepare how to receive the little children at school,(Nursery children),the two new classrooms are available but some basic needs are missed for welcoming children on 18th /1/2020.

New classrooms built by MINEDUC

The new classrooms will help to reduce overcrowding in the classrooms; it will allow to respect social distance against covid 19.

In collaboration with the parents, the new project for accessible refectory is starting but the needs are still greater.
